NON-REFEREED INDUSTRIALLY RELEVANT CONTRIBUTIONS

As a JDS Uniphase employee I researched and prepared reports on the following main topics:

- (1) Measurements and simulations of polarization mode dispersion (PMD), group delay ripple and chromatic dispersion (CD) in fiber optic components such as: WDM, DWDM, switches, fiber Bragg, AWG devices, circulators and optical modules.
- (2) Simulations for chromatic CD and PMD in high-speed long-haul and metro networks

My work has been presented in reports, internal seminars, presentations to scientists from other fiber-optic companies. Due to a non-disclosure agreement signed with the company I am not able to provide more details.
