## Exercise 8.5 Determining Geometry Using VSEPR

1. For each of the molecules listed below:

- Draw one valid Lewis diagram.

Include any non-zero formal charges on the appropriate atoms.

- Identify the electron group geometry of the central atom.
- Identify the molecular geometry.
- Redraw the molecule to show the molecular geometry. Label bond angles.

Angles should be accurate to the number of sig. fig. shown. (e.g. $109.5^{\circ}$ )
Use the ~ symbol to indicate approximate angles. (e.g. $\sim 109.5^{\circ}$ )
Use the < symbol to indicate that an angle is close to - but definitely smaller than -a
given value. (e.g. <109.5 ${ }^{\circ}$ )
Use the > symbol to indicate that an angle is close to - but definitely larger than - a given value. (e.g. >109.5 ${ }^{\circ}$ )
(a) $\mathrm{SO}_{2}$
(b) $\mathrm{BeCl}_{2}$
(c) $\quad \mathrm{OF}_{2}$
(d) $\mathrm{XeF}_{2}$
(e) $\mathrm{BBr}_{3}$
(f) $\mathrm{XeO}_{3}$
(g) $\mathrm{ClF}_{3}$
(h) $\quad \mathrm{SF}_{4}$
(i) $\mathrm{XeF}_{4}$
(j) $\mathrm{XeO}_{4}$
(k) $\mathrm{ClF}_{5}$
(l) $\mathrm{PCl}_{5}$
(m) $\quad \mathrm{SCl}_{6}$
